

# Introduction to Bioimage Analysis

Dr Ellie Cho & Dr Shane Cheung Platform Manager /Application Specialists Biological Optical Microscopy Platform

### Part 1. An Overview of Bioimage Analysis

What is trivial for a human can be very difficult for a computer:

101010		010	101 1 0	00 1 01	10110	0001	0110		10110	101
	110110	0000110		1111	00101	0101	0100	00111 01011	01011	10010 10010
100		001110	1001 0110 0000	01	110 <sup>0011</sup> 	00 11	#100 #101 0110	10101 10001 11110	0 000 00111 10101	0 01 0 10 0

### Image processing software @ BOMP

![](_page_14_Picture_0.jpeg)

![](_page_14_Picture_1.jpeg)

Upcoming image analysis workshops from BOMP:

- FIJI/Image J for Beginners
- FIJI/Image J for Quantification
- Introduction to: CellProfiler
- FIJI/Image J FIJI Macro writing for biologists
- Colocalisation
- 3D image analysis (Imaris)
- Filaments
- Tracking
- Deconvolution (Huygens)

![](_page_14_Picture_15.jpeg)

![](_page_15_Picture_0.jpeg)

![](_page_15_Figure_1.jpeg)

![](_page_16_Picture_0.jpeg)

![](_page_16_Picture_1.jpeg)

# Acquisition Pre-processing

![](_page_16_Picture_6.jpeg)

![](_page_16_Picture_7.jpeg)

![](_page_16_Picture_8.jpeg)

![](_page_16_Figure_9.jpeg)

Raw microscopy image

![](_page_17_Picture_0.jpeg)

- Acquire with sufficient sampling rate
- Avoid saturation
- Use proper bit depth

![](_page_17_Picture_4.jpeg)

- Use whole dynamic range
- Use appropriate **resolution**

![](_page_18_Picture_0.jpeg)

![](_page_18_Picture_1.jpeg)

### What is Microscopy Image

![](_page_18_Figure_3.jpeg)

### Acquire with sufficient sampling rate

![](_page_19_Picture_0.jpeg)

![](_page_19_Picture_1.jpeg)

### **Raw Microscopy Image**

![](_page_19_Figure_3.jpeg)

### Appropriate **resolution** for our object

![](_page_20_Picture_0.jpeg)

![](_page_20_Picture_1.jpeg)

### **Raw Microscopy Image**

![](_page_20_Figure_3.jpeg)

Use higher **Bit depth** for intensity measurement

![](_page_21_Picture_0.jpeg)

![](_page_21_Picture_1.jpeg)

### **Raw Microscopy Image**

![](_page_21_Figure_3.jpeg)

![](_page_21_Figure_4.jpeg)

### Use whole **dynamic range**

Avoid saturation

22

![](_page_22_Picture_0.jpeg)

- Image to be compared **MUST** be acquired (and processed) using the same settings
- Save the image using the microscopy raw format (CZI, LIF, OIB, ND2... OME-TIFF) to preserve metadata. Avoid saving as standard TIFF, JPG, PNG...

More details: <u>https://imagej.net/Category:Registration</u>

![](_page_29_Picture_0.jpeg)

Mathematical image restoration method

![](_page_29_Picture_2.jpeg)

- Increase resolution in x,y,z
- Increase contrast
- Remove noise

Thereby improves the quality of data visualisation and analysis

![](_page_29_Figure_7.jpeg)

![](_page_29_Picture_8.jpeg)

## **Object detection**

![](_page_30_Picture_2.jpeg)

![](_page_30_Picture_3.jpeg)

![](_page_30_Picture_4.jpeg)

Measurement / Data analysis

![](_page_30_Figure_6.jpeg)

Raw microscopy image

![](_page_31_Picture_0.jpeg)

![](_page_31_Picture_1.jpeg)

### **Object Detection**

• Pixel segmentation

![](_page_31_Figure_4.jpeg)

![](_page_31_Figure_5.jpeg)

- Conventional
- Machine learning
- Deep learning
- Template matching

Binary processing

![](_page_31_Picture_11.jpeg)

![](_page_32_Picture_0.jpeg)

![](_page_32_Picture_1.jpeg)

### **Conventional segmentation**

![](_page_32_Figure_3.jpeg)

- Find threshold using 'negative control' image or from the 'background' area
- To be 'objective', apply same threshold to all images

![](_page_33_Picture_0.jpeg)

### **Conventional segmentation**

#### But

THE UNIVERSITY OF

- Many 'real' images have different background levels
- Background level may change over time in the same sample in live cell imaging

![](_page_33_Figure_5.jpeg)

To compensate different background issue,

- Test different Auto-threshold methods
- Apply same auto-threshold algorithm for each image

![](_page_34_Picture_0.jpeg)

![](_page_34_Picture_1.jpeg)

- Thresholding doesn't work well with non-fluorescence images e.g. BF, phase contrast, Colour, EM images
- Segmentation using few manual annotations
- Interactive, user-friendly
- No machine learning expertise required

![](_page_34_Picture_6.jpeg)

![](_page_34_Picture_7.jpeg)

![](_page_34_Picture_8.jpeg)

![](_page_34_Picture_9.jpeg)

![](_page_35_Picture_0.jpeg)

![](_page_35_Picture_1.jpeg)

- Automatically extracts optimal image features rather than hand-tailored way
- Unsupervised detection but requires manually annotation data and computation
- Some 'pre-trained' models for bioimage are accessible via user friendly software

![](_page_35_Picture_5.jpeg)

![](_page_35_Picture_6.jpeg)

StarDist (Schmidt 2018) CellProfiler (U-net, McQuin 2018)

Cellpose (Stringer 2020)

![](_page_36_Picture_0.jpeg)

![](_page_36_Picture_1.jpeg)

- No manual annotation
- Minimal computation computes the probability to find one (or several) template images provided by user into a large image
- Good for finding similar structure in time-lapse or TMA
- No programming skill required

#### Template & Target

#### Matched image

![](_page_36_Picture_8.jpeg)

![](_page_36_Picture_9.jpeg)

![](_page_36_Picture_10.jpeg)

![](_page_49_Picture_1.jpeg)

### Colocalisation

![](_page_49_Figure_3.jpeg)

![](_page_49_Picture_4.jpeg)

molecules are on the <u>same location</u> molecules are <u>interacting</u>

- Correlation Is there a relationship between intensities? (Pearson's)
- Co-occurrence Are the fluorophores are generally near each other ?
  - Intensity based : Mander's
  - Object based : overlapping area or volume

Quantification is heavily dependent on the resolution of acquisition system so careful planning is required
